# STRUCTURE

## ROBUSTNESS AND TECHNOLOGY

Manufacturing process quality grants reliability and operational efficiency of ROMI machines. All machines are inspected with a laser system for positioning measurement and repeatability.

Axes alignment inspection is performed with a ballbar system ensuring perfect interpolation of X, Y and Z axis. ROMI D Series machines were designed with 3D CAD system and the entire structure was dimensioned by finite elements analysis software (FEA), resulting in superior structures for each machine size.

### Linear guide benefits

- Feed rates up to 40 m/min\*
- Fast positioning of axes minimizing idle times and increasing productivity
- Allow high rates of acceleration
- Low lubrication oil consumption
  - Easy maintenance
  - High rigidity and long durability

1

Monoblock **BASE** made of cast iron, designed to absorb vibrations, provides parts with excellent finishes, longer machine life and longer lasting cutting tools.

2

**COLUMN:** Dimensioned to support the headstock assembly with excellent geometric stability for the whole assembly.

3

The **TABLE** is supported on linear guides, with multiple T-slots for mounting and securing devices. Designed to support heavy parts with excellent stability.

4

**BALLSCREWS:** Hardened and ground with pre-loaded nuts provide high rigidity and high accuracy in both positioning and repeatability of axes.

5

**LINEAR ROLLER GUIDES.** Allows faster movements whilst ensuring precision and high accelerations due to low friction coefficient between the rails and blocks.

6

Brushless **AC SERVO MOTORS** are directly coupled to the ballscrews and have integrated absolute encoders, which transmit the movement directly, providing accurate positioning and excellent repeatability of axes.

(\*) Except ROMI D 600

# HEADSTOCK

## HIGH PERFORMANCE AND PRECISION

Main motor is directly coupled to the headstock cartridge which offers great efficiency in the transmission of torque, power and rotation. Spindle taper is prepared for BT / BBT, offering great rigidity for tool holders.

A robust spindle cartridge with ultra precision bearings enables excellent accuracy and minimal temperature increases of the bearings even when operating continuously in high rpm's

**CARTRIDGE** prepared for cooling system (optional). For headstocks with 15,000 rpm, the cooling system is standard, contributing to the thermal and geometric stability of the assembly.

**HEADSTOCK STRUCTURE** that offers great thermal and geometric stability, rigidity and high capacity to absorb machining efforts without vibrations even the ones generated from heavy machining.

**THERMAL COMPENSATION**

Strategically placed on the machine, mathematical algorithms correct the position of the axes in real time. In this way, stable dimensional results are obtained, even for long periods of time.

Ultra precision angular contact **BALL BEARINGS** with permanent lubrication.

Bearing sealing by labyrinth.

**PRESSURIZED SYSTEM** - pneumatic seal: to prevent the bearings from contamination by cutting coolant and particles.

**PNEUMATIC SYSTEM FOR SPINDLE TAPER CLEANING**, preventing the entry of chips to avoid damage on tool shanks.

**LINEAR ROLLER GUIDES.** Allows faster movements whilst ensuring precision and high accelerations due to low friction coefficient between the rails and blocks.

# **AUTOMATIC TOOL CHANGER**

EFFICIENCY AND PRODUCTIVITY

Fast, accurate, and reliable automatic tool changers, helping to increase productivity and machining efficiency. The automatic tool changer has 30 tools capacity (ROMI D 800/ D 1000 / D 1250) or 20 tools capacity (ROMI D 600).

(\*) For machines with thru spindle coolant system, the tool shanks and pull studs must have a hole to pass the coolant thru spindle

For rotations over 10,000 rpm, it is recommended to use BBT mandrels. Regardless of rotation, all tools should be balanced in G2.5
